Book Author Data that I have Used for this Project

To Upload Data EndPoint ScreenShot in Postman:

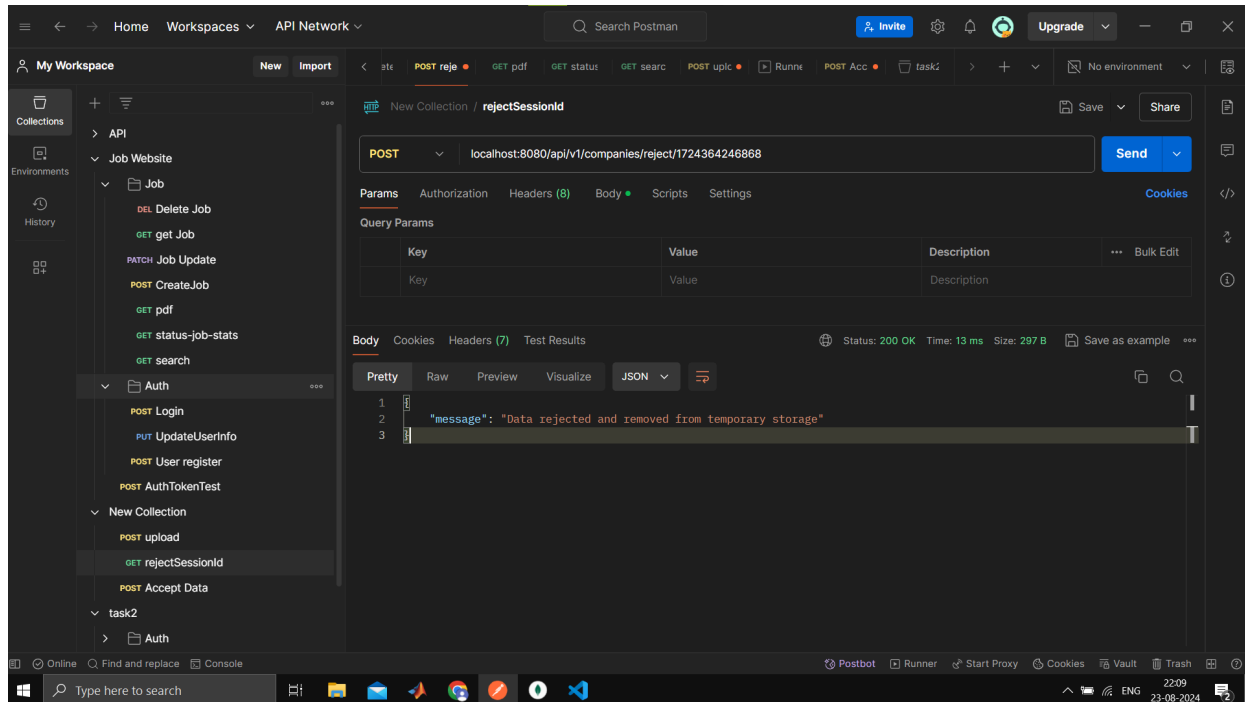

Upload File:

If All data is Valid and correct then and then it will Show 200 Success Code and Give response message, sessionId, Data To Show in Ui.

Incase of Data Reject remove data from a sessionID:

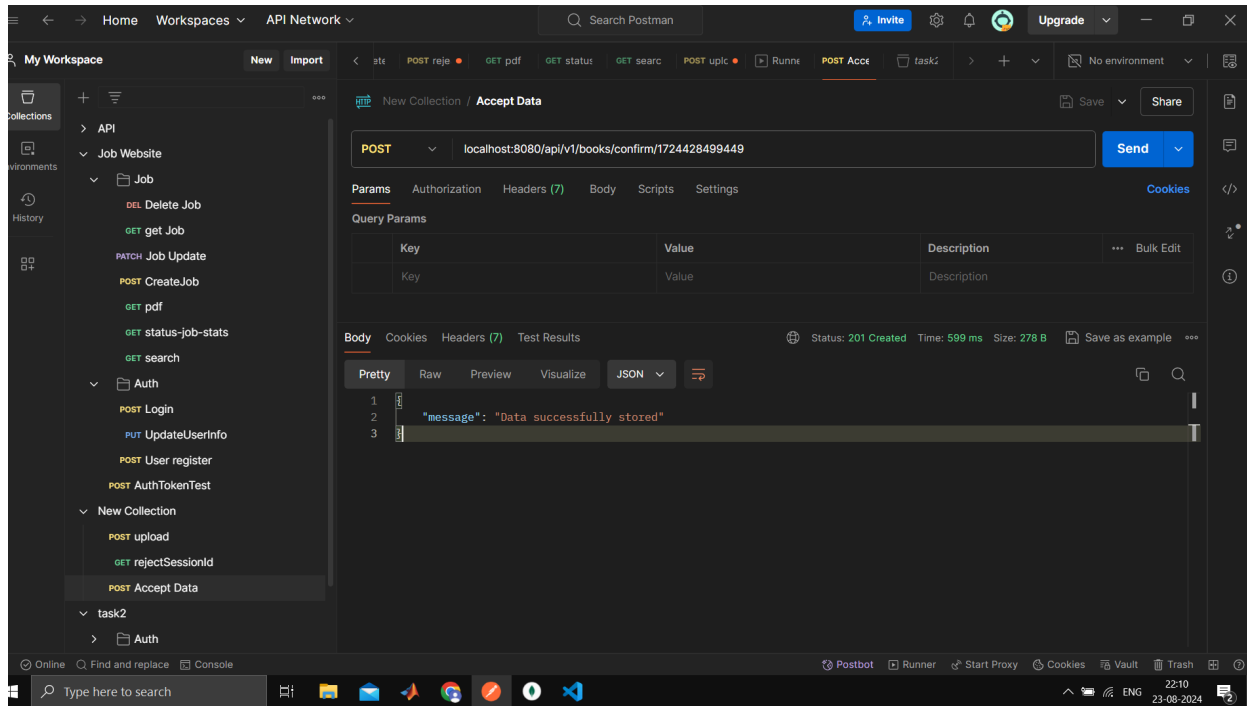

Once SessionId is Valid and there is data it will gives 200 success and remove our temporary data from the session.

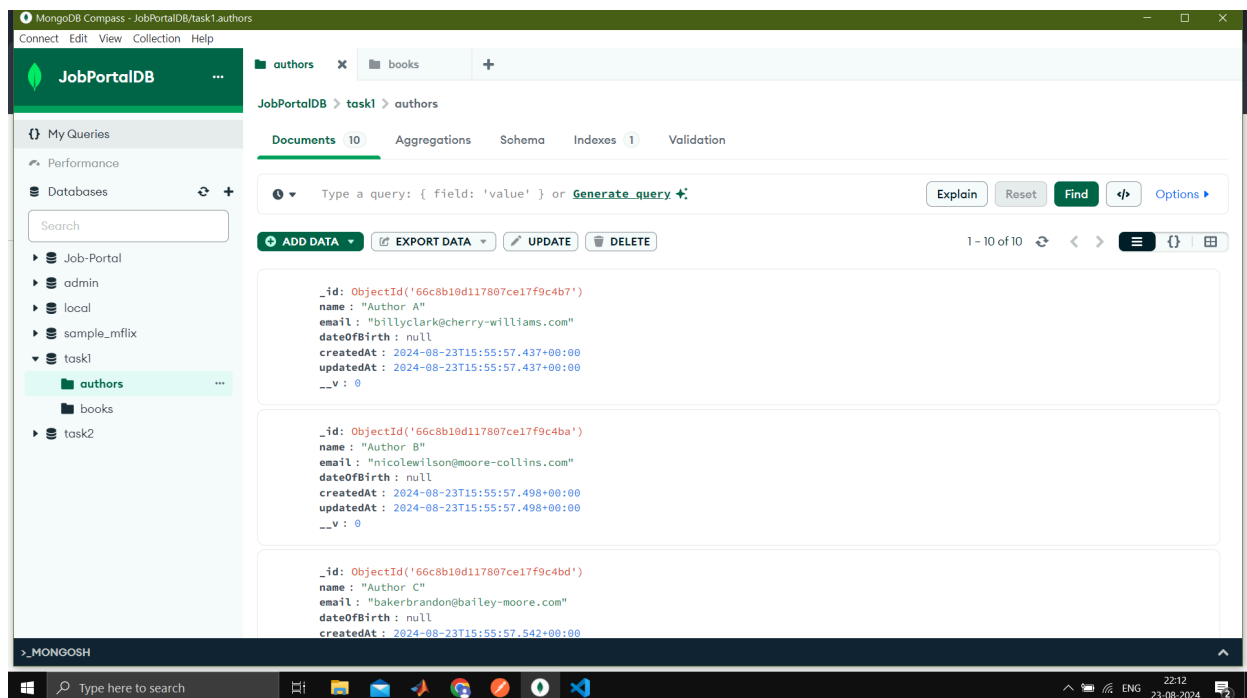

Confirm Data

Once we have data valid and ready to go we are adding data into DataBase for that we are adding data of author first as we need AuthorId in Book for mapping that this book is Published by this author.

So first add Author data then we are adding book data corresponding to AuthorId

DB ScreenShot of Author and books
